

06 — Project: Skill Tracker

Overview

****Skill Tracker**** is a full-stack portfolio project by Martín Lavín (Martin Lavin) for tracking skills, practice sessions, progress, and competitive rankings.

Repository: github.com/mlavinc/skill-tracker

What it does

Users can track skills and practice progress through a web application with a REST API backend, relational database, and containerized local development. Cloud deployment patterns include Vercel (frontend) + Render (API) + Neon (PostgreSQL).

Technology stack

Layer	Technology
---	---
Frontend	React + Vite
Backend	Go (`net/http`)
Database	PostgreSQL
Local orchestration	Docker + Docker Compose
Cloud options	Vercel, Render, Neon

Natural-language Q&A

****Tell me about Skill Tracker / What is Skill Tracker?****

Skill Tracker is Martín's full-stack learning/progress app built with Go, React, PostgreSQL, and Docker. It demonstrates backend API design, relational data modeling, containerization, and modern frontend integration.

****What full-stack projects has Martin built?****

Skill Tracker is his primary full-stack Go + React project, complementary to his cloud/ML/RAG portfolio work.
